

Muhammad Sohaib Nisar

Software Engineering Student

Khanna, Islamabad | 0346-0886912 | rajanisar389@gmail.com | github.com/sohaib61595 | [LinkedIn](#)

OBJECTIVE

Software Engineering student (7th semester, CGPA 3.81/4.00) with hands-on experience in machine learning, embedded systems, and web development. Seeking an internship to apply analytical thinking, technical problem-solving, and coordination skills in a practical engineering environment.

EDUCATION

BS Software Engineering — FUUAST, Islamabad

CGPA: 3.81 / 4.00

KEY SKILLS

- Programming: C++, Python, JavaScript, OOP concepts
- Machine Learning: Linear Regression, KNN, SVM, K-Means, DBSCAN
- Data Analysis: Pandas, NumPy, Matplotlib, EDA, data cleaning & filtering
- Web Development: HTML, CSS, JavaScript (basics)
- Databases: SQL fundamentals (MySQL)
- Embedded Systems: Arduino, Tinkercad, hardware assembly
- Tools: MS Office (Excel, Word, PowerPoint)

EXPERIENCE

Machine Learning Intern — GrowUp

3 Months

- Gained hands-on experience applying machine learning concepts and workflows in a professional setting.
- Collaborated with a team on ML-related tasks, strengthening practical skills in model development and data handling.

PROJECTS

SMC AI Trading Bot

github.com/sohaib61595/SMC-AI-Trading-BOT

- Built a machine-learning-driven trading bot with a defined pipeline architecture, using MLflow for experiment tracking.
- Improved model accuracy with multi-timeframe features, triple-barrier targets, and hyperparameter optimization.
- Implemented risk management controls including circuit breakers, aggregate risk caps, and slippage protection.

AI Firewall — LLM Prompt Injection Defense System

github.com/sohaib61595/AI-Firewall-Softaverse-project

- Architected an NLP-driven machine learning model over a 3-month development cycle to detect and block malicious jailbreak attempts on large language models.
- Scaled the model to process and evaluate 50,000 distinct features for high-accuracy threat detection.

HR Analytics Dashboard

github.com/sohaib61595/HR-Analytic-Dashboard-

- Built an end-to-end HR analytics dashboard in Power BI to analyze employee attrition across demographics, job roles, and departments.
- Surfaced KPIs and attrition trends by salary band, tenure, and satisfaction metrics to support data-driven retention decisions.

AI Software Engineer — Autonomous Codebase Agent

- Built an autonomous AI coding agent that ingests repositories, plans development tasks, edits code, and runs tests in a sandboxed environment.
- Implemented repository understanding with AST-based code chunking, semantic retrieval, and multi-language support across Python, Java, Go, Rust, and more.

Gain AI — Android App

github.com/sohaib61595/Gain-AI-Android-App

- Developed an Android chat application integrating AI language models via OpenRouter and DeepSeek APIs.
- Implemented a model selector, Retrofit-based networking, and coroutine-driven asynchronous operations for a responsive chat experience.

LEADERSHIP & COMMUNICATION

- Coordinated and led group programming assignments and end-of-semester lab projects.
- Maintained strong performance under academic deadlines.
- Developed clear written and verbal communication through academic presentations and technical documentation.
